PROFESSIONAL SUMMARY

A final-semester student having completed all final exams, and academic commitments in IT Engineering with a strong foundation in full-stack development, specializing in scalable web systems and decentralized applications, with hands-on experience in blockchain-based projects, along with database management technologies. Proven ability to develop scalable web applications using modern frameworks like React, Node.js, Python, ICP-SDK (Motoko), and PHP. Passionate about transforming ideas into solutions and making a difference. Seeking an entry-level position to contribute technical skills and grow as a software developer.

EDUCATION

Bachelor of Engineering in Information Technology Nepal College of Information Technology, Pokhara University	Expected: April 2026 Status: Degree requirements completed

TECHNICAL SKILLS

Programming Languages: JavaScript, Motoko, Python, C, Java, C++, HTML5, CSS3, SQL

Frontend: React.js, Vue.js, Next.js, Tailwind CSS, SASS

Backend: Node.js, Express.js, ICP Canisters, RESTful APIs, GraphQL

Databases: PostgreSQL, MySQL, Firebase, Supabase, DLT (Decentralized), MongoDB

Cloud & DevOps: Docker, Git, GitHub, CI/CD

CERTIFICATIONS

- The Complete Full-Stack Web Development Bootcamp — Udemy (Dr. Angela Yu)
- Python Mega Course: Build 20 Real-World Apps and AI Agents — Udemy (Ardit Sulce)

PROJECTS

Originality Checking NFT Marketplace | *React.js, Node.js, Next.js, Motoko, Python, Supabase*

- Developed an NFT marketplace, providing a three-layer originality verification through SHA-256 hash mapping for duplicate NFT minting, pHash along with Hamming Distance for very similar NFT minting, and CLIP ViT-B32 (Vision Transformer based) verification for derived NFT minting through FastAPI, while also providing a unique incentivization module allowing users to earn utility tokens for transactions. This project tackles a real-world problem in existing NFT Marketplaces of plagiarized minting, providing a pre-mint originality verification.

Influencer Matchmaking Platform | *React.js, Node.js, Express.js, PostgreSQL, Tailwind CSS*

- Developed a complete Influencer matching solution with real-time matchmaking based on the brand requirements, influencer rating, and similarity, and a fully responsive design. Features include JWT based authentication, influencer searching, requesting influencers for marketing campaigns, and brand searching, along with Multi-user support (Either as a Brand or as an Influencer). This project primarily focuses on SMEs, to find relevant emerging content creators for marketing campaigns.

College Community Web Application| *JavaScript, React.js, PHP, MySQL, Tailwind CSS*

- Developed a collaborative space for college students where they can seamlessly share notes, stay informed about campus events, and actively engage in polls to express their opinions, where these polls are timed, and decisions are referred to the college authorities.

LAN-Based Multiplayer Quiz Application| *JavaScript, C, TCP/IP Sockets, Tailwind CSS*

- Developed LAN-Based 'Guess the Flag' quiz using C socket programming concept of TCP/IP sockets for communication and Linked List for maintaining leaderboard state and a web frontend, where the server keeps track of each player in the LAN using their ID and maintains a real-time leaderboard.

eFIR Registration System (Hackathon)| *JavaScript, Python, Django, MySQL, Tailwind CSS*

- Showcased an eFIR system allowing users to register a minor offence or non-emergency incidents without having to visit a Police Station, for example a phone theft or any form of larceny-theft.
