PROFESSIONAL SUMMARY

A final-year IT Engineering student with a strong foundation in full-stack development, database management, and cloud technologies. Proven ability to develop scalable web applications using modern frameworks like React, Node.js, Python, ICP-SDK (Motoko), and PHP. Passionate about transforming ideas into solutions and making a difference. Seeking an entry-level position to contribute technical skills and grow as a software developer.

EDUCATION

Bachelor of Engineering in Information Technology Nepal College of Information Technology, Pokhara University	Expected: April 2026

TECHNICAL SKILLS

Programming Languages: JavaScript, Motoko, Python, C, Java, C++, HTML5, CSS3, SQL

Frontend: React.js, Vue.js, Next.js, Tailwind CSS, SASS

Backend: Node.js, Express.js, ICP Canisters, RESTful APIs, GraphQL

Databases: PostgreSQL, MySQL, Firebase, Supabase, DLT (Decentralized), MongoDB

Cloud & DevOps: Docker, Git, GitHub, CI/CD

Tools: VS Code, Figma, Postman, Jest

PROJECTS

Originality Checking NFT Marketplace | *React.js, Node.js, Next.js, Motoko, Python, Supabase*

- Developed an NFT marketplace, providing a three-layer originality verification through SHA-256 hash mapping for duplicate NFT minting, pHash along with Hamming Distance for very similar NFT minting, and a CNN-based verification for derived NFT minting, while also providing a unique incentivization module allowing users to earn utility tokens for transactions.

Influencer Matchmaking Platform | *React.js, Node.js, Express.js, PostgreSQL, Tailwind CSS*

- Developed a complete Influencer matching solution with real-time matchmaking based on the brand requirements, influencer rating, and similarity, and a fully responsive design. Features include JWT based authentication, influencer searching, requesting influencers for marketing

campaigns, and brand searching, along with Multi-user support (Either as a Brand or as an Influencer).

College Community Web Application| *JavaScript, React.js, PHP, MySQL, Tailwind CSS*

- Developed a collaborative space for college students where they can seamlessly share notes, stay informed about campus events, and actively engage in polls to express their opinions, where these polls are timed, and decisions are referred to the college authorities.

LAN-Based Multiplayer Quiz Application| *JavaScript, C, TCP/IP Sockets, Tailwind CSS*

- Developed LAN-Based 'Guess the Flag' quiz using C socket programming concept of TCP/IP sockets for communication and Linked List for maintaining leaderboard state and a web frontend, where the server keeps track of each player in the LAN using their ID and maintains a real-time leaderboard.

eFIR Registration System (Hackathon)| *JavaScript, Python, Django, MySQL, Tailwind CSS*

- Showcased an eFIR system allowing users to register a minor offence or non-emergency incidents without having to visit a Police Station, for example a phone theft or any form of larceny-theft.
